ASSEMBLY
INSTRUCTIONS*

*It is recommended that two persons carry out the assembly

info@metalware.ca | www.metalware.ca | (514) 937 - 9533
**STEP 1**
*If you are not using footplates, please go directly to STEP 2.*

Bolt the footplate at the bottom of each upright, and add a short shelf clip on the first level. This clip is intended to support the lower shelf when using a footplate.

⚠️ Only one short shelf clip is needed per each post, even if side by side units are used.⚠️

**STEP 2**

While holding the 4 uprights, insert 4 shelf clips and install the bottom shelf. If you are also installing footplates directly insert the bottom shelf on the short shelf clips. Then, insert the required shelf clips in the top holes and install the top shelf.

⚠️ Make sure the shelf clips are positioned as shown on the right.⚠️

**STEP 3**

Determine the shelves elevations and then place the shelf clips onto the posts at the desired height. Install sides brace with the supply bolts without tightening them to permit final adjustments.

⚠️ Do not use braces and end panels as they both serve the same purpose.⚠️

**STEP 4**

Using a screwdriver, angle the tips of the back brace in the proper position. Then, bolt the back braces on the post. If you are using back panels, bolt them as shown.
**STEP 5**
Install the shelves at the desired height.

⚠️ Ensure the section is square and tighten the nuts and braces ⚠️

Use two hooks per hole to place units side by side.

---

**CORNER GUSSETS**
Use gussets to ensure rigidity of the section when you are not using back braces and back pannels. Second gusset hole must be drill on location after levelling the unit, do not use tek screw.

⚠️ 4 pairs of gussets every 2nd section ⚠️

**BASEPLATE**
Slide the base plate, use base snap to lock into place.

**TIE CLIP**
Install 2 tie clips at the top and bottom of every section with side braces.

**DIVIDERS**
4 dividers clips are needed per dividers.

**SLIDING DIVIDERS**
2 dividers clips are needed per dividers.
NOTICE
Use Caution when handling and assembling metal parts. The metal may have sharp edges or corners. The use of protective gloves is recommended. Do not use this unit for anything that is outside the designed function of storage. Do not store loose or heavy items on the top shelves or on the top of the unit, for they create a falling hazard that can injure yourself or others. Always remember to use proper lifting techniques when moving either the boxed or assembled unit. Shelving should be periodically inspected for loose bolts, for damaged "T" uprights or shelves, for proper seating of shelf and clip. Check loading to assure it is not being overloaded. If any damage is detected, units should be unloaded immediately and repaired or replaced before returning to service.
